MRID

Patient Name	مروان مكي عبد الله النسي	MRID	896573
Gender	Female	Order Date & Time	18/11/2025 10:52 PM
Age	36 Y	Order No.	8099
Refers By	د / طارق حجاز	Order No.	263268

Cervical Spine MRI

Findings:

- * Good alignment of cervical spine with no evidence of spinal instability.
- * Average sagittal diameter of cervical bony spinal canal.
- * Maximal disc spaces with no significant posterior disc bulge.
- * Normal signal pattern and thickness of cervical spinal cord.
- * Normal craniocervical junction.
- * Normal appearance of vertebral bodies and posterior neural elements.
- * Normal marrow signal of cervical vertebral bodies.

Conclusion:

Left paraspinal well defined oval soft tissue mass lesion measuring 1.9 x 1.6 x 2.8 returning intermediate signal on T1w and hyperintense signal on T2w exhibiting diffuse enhancement seen related to cranial base extending to skull base with no intracranial extension exerting mild mass effect on pharynx and left prevertebral muscles with no stable adjacent lymph nodes. Its radiological features favoring diagnosis of nerve sheath tumor.

Dear Colleagues... thank you for referring the case --

DR/Hashwan Al-Shamali MD
Consultant Radiologist
